

EMF Directive Explained

1 Day Course

Why attend?

The aim of the course is to provide an overview of the EMF (Electromagnetic Fields) Directive, which lays down the minimum health and safety requirements for exposure of workers to electromagnetic fields (EMFs).

This long-awaited Directive 2013/35/EU, was transposed into UK law by The Control of Electromagnetic Fields at Work Regulations (SI 2016 no. 588), making it an important part of Health and Safety at Work.

The new Directive, sometimes referred to as the 'Physical Agents Directive', replaced the never in force 2004/40/EC and complements the older recommendation 1999/519/EC.

The Directive is based on exposure limit values and action levels, which are aimed at preventing adverse health effects. It also includes methods and procedures for managing and measuring the human exposure to EMFs in the work place.

Organisations need to hold evidence of compliance with its legal requirements and this EMF safety at work training helps them to be able to do so.

Who should attend?

This course is intended to help decision-makers and health and safety professionals in manufacturing and service industries to become familiar with the requirements of the Directive.

Your programme includes:

- Introduction to EMFs
- Electromagnetic fields & human health
- Scientific guidelines for limiting human exposure
- Legislation, Directives & Standards
- Hazard ID, management & zoning
- Test equipment familiarisation

Price: £495 + VAT

Would you prefer an in-house or bespoke course?

Here at Eurofins York we can deliver most of our courses on-site and even tailor courses to your own personal requirements.

Key Benefits

- Understanding the health effects of human exposure to EMFs
- Learn how to manage and measure human exposure to EMFs in the workplace
- Understand the requirements of European legislation
